

DIGITAL COMBINATION LOCK

With a solid zinc alloy housing, ten digit keypad, multiple fixing points and a secure key override, this digital combination lock is the perfect choice for a wide variety of applications.

The unit can be used in private mode for permanent assignment or in public mode for temporary assignment with 4 or 6-digit user codes.

A 6-digit sub-master code gives more flexibility and an 8-digit master code allows access to a large number of useful functions.

An optional version allows for alarm functions. It also allows the unit to be used with coin operated locks.

Typical applications include lockers, cupboards, medical cabinets, furniture and other enclosures.
