Fatfile™

Designer Paul Morris turned the utilitarian notion of filing systems on its head and pushed the boundaries of sheet metal fabrication with his design of the iconic Fatfile™.

These bold and beautifully detailed work centre features are designed for commercial office environments, but work equally well in the home.

Following the completion of tertiary studies in Metallurgy and Marine Archaeology, Paul Morris has evolved a distinctive design practice, influenced by the conceptual ideas and methodologies relating to these disciplines.

Paul formed the company Join in 1997, however has been in the industry for 36 years. Join specialises in the creation of high calibre furniture design and production, for commercial and domestic applications. Paul has continued to evolve his ongoing commitment to environmentally sensitive design, maintaining an emphasis on innovative and efficient manufacturing solutions without compromising the acute attention to detail and finish in all designs.

Standard Specifications for Fatfile™

Materials
Welded body made of 100% recyclable BlueScope sheet steel (with 24.2% recycled content)

Colours and finishes
Paul Morris has selected 9 Fatfile™ colours and finishes: textura deep ocean, textura monument, coast satin, transformer grey gloss, signal red gloss, black ace flat, burnished copper flat, shale grey flat and crystal clear matt.

Safety Features
Interlocking anti-tilt allows only one drawer to open to help avoid tipping.

Drawer slides have positive locking of the drawer ensuring the drawer does not slide out accidentally.

Drawer cabinets have a counter balance fixed in the interior to prevent tipping if one heavily laden drawer is fully extended.

Environmental Certification
Planex's state-of-the-art manufacturing facility in Melbourne operates under Environmental certification ISO14001 and Quality Assurance certification ISO9001
